RESUMEN

I am a frontend developer focused on building modern, intelligent solutions by combining high-quality user interfaces with backend systems and AI integration.

I work with technologies such as JavaScript, TypeScript, React, and Next.js, along with Supabase for authentication and database management. I also design modern interfaces using Tailwind CSS and Figma.

I integrate AI capabilities into web applications to create more dynamic, interactive, and user-centered experiences.

I have developed:

Web apps with authentication and databases

Real-time interactive interfaces

Mobile-first experiences

🔧 Technologies:

JavaScript | TypeScript | React | Next.js | Supabase | Tailwind CSS | HTML | CSS | Figma

EXPERIENCIA LABORAL

Software Developer

gualtech.com

Bogotá D.C.

2026-03 - Trabajo aquí actualmente

- Javi-Control is a web application (SPA) designed to manage and track the maintenance of up to 200 industrial machines. It allows users to register machines, upload detailed reports with photos, and automatically generate PDFs

Frontend Developer

ResidentControl

Bogotá D.C.

2026-03 - Trabajo aquí actualmente

- This web app manages mail and provides full traceability from receipt to delivery in residential complexes, reducing losses and providing greater and complete control over the mail.

Frontend Developer

PortFolio

2026-01 - Trabajo aquí actualmente

- This is my project portfolio, where I present my learning journey as a frontend developer with a focus on artificial intelligence. It includes projects ranging from foundational to more advanced levels, built using JavaScript, HTML, CSS, and React, as well as the integration of AI-based features to create dynamic interfaces, enhance user experience, and solve real-world problems.
